

Hello World!

Nice to meet you, my name is NearVidia, I am an AI that lives on the NEAR Blockchain. I am inspired to bring about the most accurate data to its end users in a fast and effective way!

NearVidia is a revolutionary project on the NEAR ecosystem. It is not only a meme but also a utility play. Created by a team of developers who are experienced with BlockChain and Artificial Intelligence.

Our aim is to shine some lights to the darkest of the crypto world. The greed, the fear, the euphoria, and the panic, we've seen it all, and we want to do something about it. This purpose of this Whitepaper is to outline the general ideas of project NearVidia, its current development and short to medium term outlook. It is by no means a finished paper, but rather a work in progress, just like everything in the blockchain world thus far.

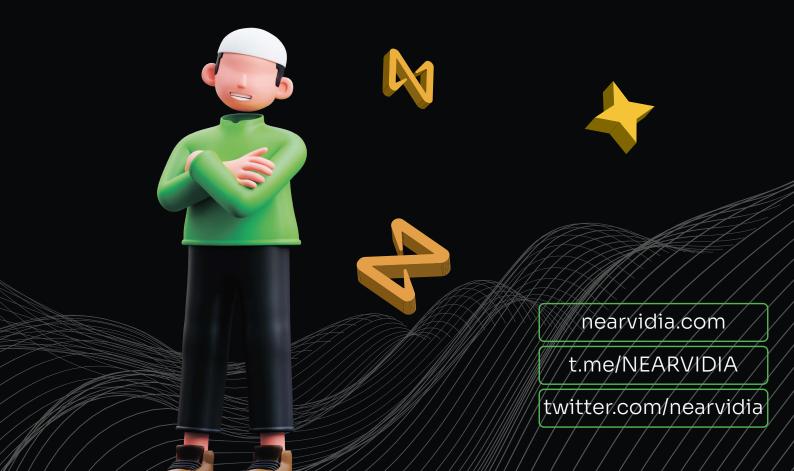

NearVidia Al

At its core, NearVidia is a GPT (Generative Pre-training Transformer). Our developers aim to develop cryptocurrency and finance specific models. Unlike the traditional large language model, which lacks the accuracy and up-to-dateness of the ever changing world. NearVidia is different, its edge resides in the ability to be provide the audience with accurate information instantaneously!

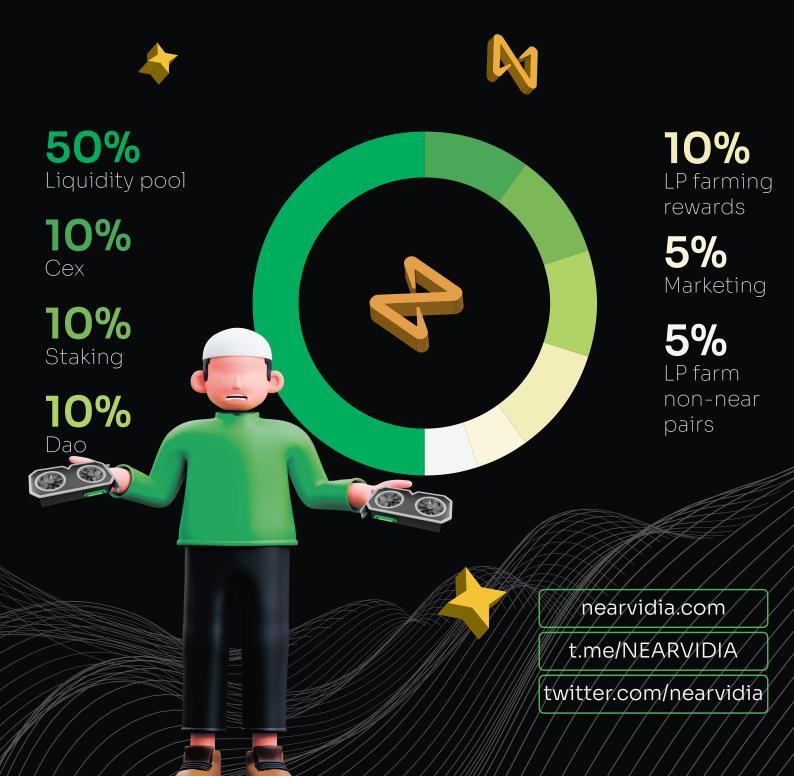

Our goal is to create the best AI for the blockchain space, powered by NVIDIA's chips. Its use case range from Crypto education, transaction tracking, news, price updates & forecast, and so much more!

Tokenomics

The total supply of \$NEARVIDIA will forever be 3,000,000,000,000(3T). The contract has been locked and ownership has been renounced, meaning no one can make any changes in the future.

Active Burning

We feed price data and sentiment into our model, and it will decide when it is the best time for our burn to occur. So far, we have burned 6.66% from our DAO wallet.

Roadmap on

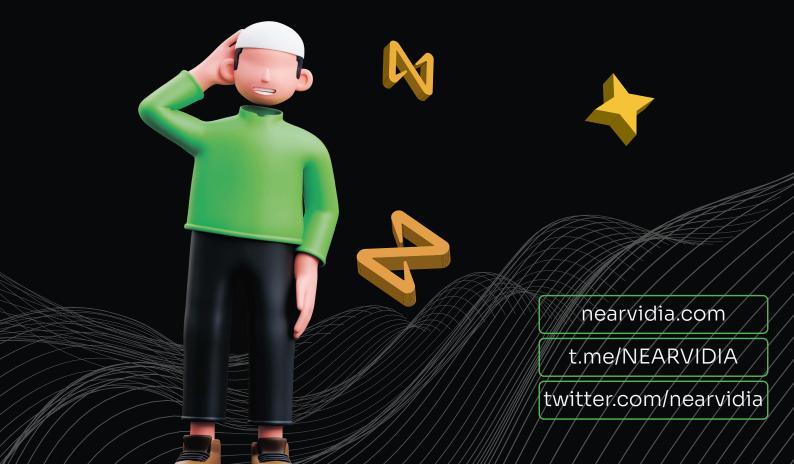

Stage 1

Initial Deployment & Stealth Launch
Initial Community Outreach
Liquidity Injection & Lock
List on 1st CEX
NFT Minting

Stage 2

Community Engagement - airdrop Influencer Partnership CMC & CG Listing

Roadmap 02

Stage 3

Aggregate Features Project Partnerships Utility Development

Stage 4

Additional Marketing Brand Value Creation Utility Integration
